Product Requirements Document

Cinnamon Prototype: "Holdings-Only" Tracker for Upward Movers

1. Strategic Context & Vision

Based on the recent shift in strategy, Cinnamon is refocusing on the **Upward Movers** segment to raise average assets under management (AUM) above the £20,000 threshold required to offset the £230 customer acquisition cost (CAC). Upward Movers are time-poor professionals earning £75k-£100k, who value transparency, performance tracking, and ease of use over complex trading functionalities.

The Core Concept: A strictly "Holdings-Only" application. Unlike broad platforms (e.g., standard Zerodha or E-Trade) that emphasize market discovery and active trading, this prototype will exclusively display the stocks/assets the user already owns. It eliminates market noise, satisfying the segment's need for extreme ease-of-use and immediate visibility on their current financial standing.

2. Base-Level Feature List

- **Unified Portfolio Dashboard:** A single-screen summary showing Total AUM, Day's P&L, and All-Time P&L in clear, large typography.
- **My Holdings List:** A clean, read-only table/list of owned assets detailing Ticker Name, Quantity Owned, Average Buy Price, Current Market Price, and Net Return. *(No buy/sell buttons).*
- **Visual Asset Allocation:** A simple, elegant donut chart breaking down the user's holdings by sector (e.g., Tech, Healthcare) or asset class, fulfilling the need for "Visibility on Asset Allocation."
- **Benchmark Comparison:** A minimalist line chart comparing the portfolio's performance against standard market benchmarks (e.g., FTSE 100 or S&P 500), satisfying the need for "Better Performance" visibility.
- **Transparent Fee/Cost Summary:** A dedicated, easy-to-find toggle that shows exactly how much Cinnamon is charging for management, directly addressing the segment's fear of "hidden fees."

3. Product Requirements Document (PRD)

3.1. Target Audience Profiling

- **Demographic:** Late 30's and 40's, living in London/South East.

- **Financials:** Two high incomes (£75K-£100K disposable).
- **Psychographic:** Time-poor, career-minded, already utilizing DIY services or IFAs but unhappy with opacity and complexity.

3.2. Problem Statement

Upward Movers are overwhelmed by trading-heavy interfaces that require time and research to navigate. They need a fast, transparent way to see exactly what they own, how it is performing, and what it costs them, without the distraction of market news or trading prompts.

3.3. Scope Definitions

> **In Scope (Prototype):** Read-only portfolio views, performance charts, allocation visuals, benchmark comparisons, and transparent fee reporting.
>
> **Out of Scope (Strictly Forbidden):** Buy/sell execution, order books, market news feeds, stock screeners, trending stocks, social trading.

3.4. User Stories

User Need (Case Derived)	User Story	Acceptance Criteria
Time Poor (Ease of Use)	As a busy professional, I want to open the app and see my net worth and today's return within 3 seconds.	Dashboard loads instantly with Total Value and 1D Return in large, legible font. No pop-ups or news.
Visibility on Allocation	As an investor, I want to see how my money is distributed across different sectors.	A donut chart is present on the main screen categorizing all owned assets.
Transparency / Value	As a customer wary of banks, I want to clearly see the fees I am being charged.	A dedicated "Fees & Statements" module explicitly stating the monthly management cost in absolute terms (£).

4. Final Prompt for AntiGravity (AI Code Generator)

Copy and paste the following prompt into AntiGravity to generate the interactive prototype:

```
Act as an expert Frontend Developer and UX Designer. Build a high-fidelity,
```

interactive web app prototype using React, Tailwind CSS, and a charting library (like Recharts).

PROJECT GOAL:
Create a minimalist, "Holdings-Only" wealth tracking dashboard tailored for time-poor, high-income professionals. This app is strictly for viewing existing investments—it is NOT a trading platform.

CORE RESTRICTION:
Do NOT include any "Buy", "Sell", "Trade", or "Discover" buttons. Do not include market news, trending stocks, or global market tickers. The interface must ONLY show what the user already owns.

APP STRUCTURE & REQUIREMENTS:

1. Global UI/UX:
- Theme: Clean, premium, and trustworthy (use a color palette of white, slate gray, subtle blues, and positive/negative indicators in muted green/red).
- Layout: A simple sidebar navigation (Dashboard, My Holdings, Allocation, Fees/Reports) and a main content area.

2. Dashboard View (Default):
- A large, clear hero widget showing "Total Portfolio Value" (mock data: £34,500).
- Sub-metrics: "Today's Return" (+£120) and "All-Time Return" (+£3,400).
- A simple historical line chart showing portfolio growth over the last 12 months compared against a benchmark index (e.g., FTSE 100).

3. My Holdings View:
- A clean, well-spaced table listing 5-6 mock owned assets (e.g., Apple, Vanguard S&P 500, UK Gilts).
- Columns: Asset Name, Ticker, Shares Owned, Avg Cost, Current Price, Total Value, Return (%).

4. Asset Allocation View:
- A donut chart breaking down the portfolio by Sector (Technology, Healthcare, Bonds, Cash).

5. Transparency / Fees View:
- A simple card stating "Cinnamon Management Fee: £X this month" to establish absolute transparency.

Ensure the design is fully responsive, looking great on both desktop and mobile. Use mock data to populate all fields so the prototype is immediately demonstrable.
